

Information Security Management

ISO/IEC 27001:2005

With the increase in opportunities to do business globally and the increased flow of information combined with the increase in sophistication of information security attacks, there is an urgent need to protect the confidentiality, integrity and availability of information.

Security products provide protection against damage to information, but they need to be supplemented with a monitoring mechanism. If you want your partners and customers to trust your information you need an Information Security Management System (ISMS).

Standards

SAI Global distributes Standards from around the world, including Australian Standards and ISO. Some of the Standards available include:

- **ISO/IEC 27001:2005, Information Technology – Security Techniques – ISMS – Requirements** - This specifies the requirements for establishing, implementing, operating, monitoring, reviewing, maintaining and improving a documented ISMS framework.
- **ISO/IEC 27002:2005 Information technology - Security techniques - Code of practice for information security management**
- **ISO/IEC 27003:2010 Information technology - Security techniques - Information security management system implementation guidance**
- **ISO/IEC 27005:2011 Information technology - Security techniques - Information security risk management**

Audit

SAI Global auditors independently assess important areas of your operations. They approve the scope of certification and review your ISMS at regular intervals seeking clarification and evidence that your goals and obligations are met and then report on the status of your system.

These reports will enable you to make decisions or take action in a timely manner to give you the confidence that your information security commitments are being met.

Whether you are looking for scoping, training, risk assessment, milestone review or certification, SAI Global has a solution to meet your needs including:

- Risk or Gap Assessment
- Certification to the recognized international standard ISO/IEC 27001:2005 or industry recognized standards such as PCI-DSS
- Independent checks that claims you make on compliance statements can be verified.

Training

SAI Global has a number of training solutions to help you implement, manage and maintain your system based on ISO 27001.

Contact SAI Global

SAI Global Limited is one of the world's leading business publishing, compliance, training and assurance organizations with offices in Europe, Australia, New Zealand, and North America and across Asia.
