

Australian Standard™

Valves for compressed gas cylinders

**Part 1: Specifications, type testing, and
manufacturing tests and inspections**

This Australian Standard was prepared by Committee ME-002, Gas Cylinders. It was approved on behalf of the Council of Standards Australia on 6 January 2006. This Standard was published on 24 February 2006.

The following are represented on Committee ME-002:

Air Conditioning and Refrigeration Wholesalers Association
Australasian Institute of Engineer Surveyors
Australia New Zealand Industrial Gas Association
Australian Chamber of Commerce and Industry
Australian Industry Group
Australian Liquefied Petroleum Gas Association
Department for Administrative and Information Services, SA
Fire Protection Association of Australia
Institute of Materials Engineering Australasia
International Association for Natural Gas Vehicles
Pressure Equipment Association Incorporated
The Australian Gas Association
Victorian WorkCover Authority
Welding Technology Institute of Australia
WorkCover New South Wales

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to the Chief Executive, Standards Australia, GPO Box 476, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 05354.

Australian Standard™

Valves for compressed gas cylinders

Part 1: Specifications, type testing, and manufacturing tests and inspections

Originated as part of AS B240—1966.
Previous edition part of AS 2473—1996.
Revised in part and redesignated as AS 2473.1—2006.

PREFACE

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee ME-002, Gas Cylinders to supersede part of AS 2473—1996, *Valves for compressed gas cylinders (threaded outlet)*. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian, rather than an Australian/New Zealand Standard.

This Standard results from a decision to expand AS 2473—1996 into a suite of Standards for valves for compressed gas cylinders based as much as possible on ISO Standards. This edition of AS 2473 comprises three parts as follows:

Part 1: Specifications, type testing, and manufacturing tests and inspections (this Standard).

Part 2: Outlet connections (threaded and stem (inlet) threads).

Part 3: Outlet connections for medical gases (including pin-indexed yoke connections).

Part 3 was formerly designated as AS 2472 and is largely based on ISO 407. Further parts may be prepared in the future.

This Standard was based on the following principles:

- (a) To align as closely as possible with ISO 10297, *Transportable gas cylinders—Cylinder valves—Specification and type testing* and ISO 14246, *Transportable gas cylinders—Gas cylinder valves—Manufacturing tests and inspections*, to allow supply to Australia of cylinder valves designed and tested to ISO Standards, but without excluding alternative options and maintaining an independent, stand alone Australian Standard to allow the incorporation of unique or historical Australian requirements (e.g. safety devices, inlet and outlet connections threads, spindle sizes for key operated valves, and including cross-references as needed to Standards referenced in AS 2030.1, *The verification, filling, inspection, testing and maintenance of cylinders for the storage and transport of compressed gases, Part 1: Cylinders for compressed gases other than acetylene*).
- (b) To provide a single Standard to cover the design and type testing of valves as well as their manufacturing tests and inspections, basing it as much as possible on the current versions and planned revisions of ISO 10297 and ISO 14246.
- (c) To adopt the structure of ISO 10297:2006, making the minimum necessary changes to its Section 4, Valve design requirements, to resolve some inconsistencies and relax considerably its Section 6, Type testing methods to make it performance-oriented instead of rigidly prescriptive.

In following closely the structure and content of ISO 10297 (see Sections 2 and 4 of this Part) and ISO 14246 (see Section 3 of this Part), this Standard expands greatly the requirements for the specification and testing of cylinder valves in AS 2473—1996 whilst retaining its core concepts. This Standard follows ISO 10297 with the following departures and changes:

- (i) Definitions of test pressures have been clarified and expanded to make them consistent with AS 2030.1.
- (ii) Requirements for manufacturing tests and inspections have been incorporated into the text, as they are in AS 2473—1996.
- (iii) Relationship with ISO 11117, *Gas cylinders—Valve protection caps and valve guards for industrial and medical gas cylinders—Design construction and tests* has been clarified.

- (iv) Requirements for the inlet and outlet connections in AS 2030.1 and AS 2473.2 have been substituted for or expanded on those in ISO 10297.
- (v) Resistance to mechanical impact has been brought closer to the new approach in ISO 10297 but following and maintaining the experience gained with AS 2473—1996.
- (vi) Requirements for pressure relief devices according to AS 2030.1 and AS 2613, were introduced.

It should be noted that AS 2473.1 modifies some requirements in AS 2473—1996 as indicated above, but AS 2473—1996 can only be withdrawn when AS 2473.2 is issued. Also it should be noted that, as with Australian Standards, ISO Standards are under continuous development. ISO 10297, in particular, is undergoing a long and careful revision and improvement process. Users of this Standard should be aware that revisions to ISO 10297 could introduce additional differences to AS 2473.1 that may be subsequently incorporated by amendment or revision.

The term ‘informative’ has been used in this Standard to define the application of the appendix to which it applies. An ‘informative’ appendix is only for information and guidance.

Statements expressed in mandatory terms in notes to figures are deemed to be requirements of this Standard.

NOTE THAT FULL COMPLIANCE WITH THIS STANDARD MAY NOT NECESSARILY FULFIL ALL LEGAL OBLIGATIONS.

STANDARDS AUSTRALIA

Australian Standard
Valves for compressed gas cylinders

Part 1: Specifications, type testing, and manufacturing tests and inspections

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE

This Standard specifies requirements for valve design, construction and manufacturing, type testing and marking.

This Standard applies to valves intended to be fitted to gas cylinders which convey compressed, liquefied or dissolved gases.

This Standard does not apply to valves for cryogenic equipment, fire extinguishers, or those with self-closing action.

Additional specific requirements for valves fitted with devices, e.g. pressure-reducing, residual pressure-retaining and non-return mechanisms, are not covered by this Standard.

NOTE: Correspondence between this Standard and ISO 10297 is given in Appendix C.

1.2 REFERENCED DOCUMENTS

The following documents are referred to in this Standard:

AS

- | | |
|--------|---|
| 2030 | The verification, filling, inspection, testing and maintenance of cylinders for the storage and transport of compressed gases |
| 2030.1 | Part 1: Cylinders for compressed gases other than acetylene |
| 2473 | Valves for compressed gas cylinders |
| 2473.2 | Part 2: Outlet connections (threaded) and stem (inlet) threads |
| 2473.3 | Part 3: Outlet connections for medical gases (including pin-indexed yoke connections) |
| 2613 | Safety devices for gas cylinders |
| 3840 | Pressure regulators for use with medical gases |
| 3840.1 | Part 1: Pressure regulators and pressure regulators with flow-metering devices |
| 4955 | Transportable gas cylinders—Compatibility of cylinder and valve materials with gas contents |
| 4955.1 | Part 1: Metallic materials |
| 4955.2 | Part 2: Non-metallic materials (ISO 11114-2:2000, MOD) |
| 4955.3 | Part 3: Autogenous ignition test in oxygen atmospheres |

ISO
