

Australian Standard[®]

Fire hose reels

This Australian Standard was prepared by Committee FP/7, Fire Hose Reels. It was approved on behalf of the Council of Standards Australia on 5 December 1990 and published on 28 March 1991.

The following interests are represented on Committee FP/7:

Australian Assembly of fire Authorities
Australian Uniform Building Regulations Co-ordinating Council
Commonwealth Fire Board
Confederation of Australian Industry
Fire Protection Industry Association of Australia
Insurance Council of Australia
Plastics Industry Association
Telecom Australia
Water Board, Sydney-Illawarra-Blue Mountains
Western Australian Fire Brigades Board

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

Australian Standard[®]

Fire hose reels

First published as AS A155—1966.
Revised and redesignated AS 1221—1972.
Second edition—1976.
Third edition—1981.
Fourth edition—1983.
Fifth edition—1989.
Sixth edition—1991.
Incorporating:
Amdt 1—1992

PREFACE

This Standard was prepared by the Standards Australia Committee on Fire Hose Reels to supersede AS 1221—1989.

Alterations to the previous editions are as follows:

- (a) The format has been changed to comply with Standards Australia style.
- (b) Consistency has been sought in the naming of the component parts of a fire hose reel. The parts' names have also been added to the figures contained in this Standard. The use of the word 'assembly', in the description of a component part, has been discontinued.
- (c) Clause 2.2.2, which specifies requirements for nozzles, has been substantially revised to more clearly identify the requirements for different types of nozzles.
- (d) The material specification of waterways of the spigot or shaft, contained in Clause 2.2.4.4, has been extended to include galvanized or plated carbon steel.
- (e) The performance requirements, contained within Section 3 of this Standard, and particularly the information provided within the Appendices, have been revised to provide clarity to the various test requirements.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

STANDARDS AUSTRALIA

Australian Standard Fire hose reels

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE This Standard specifies requirements for the design, construction, and performance of fixed and swing fire hose reels.

1.2 REFERENCED DOCUMENTS The following documents are referred to in this Standard:

AS

1180 Methods of test for hose made from elastomeric materials

1180.4B Method 4B: Ply adhesion—Autographic method

1180.5A Method 5A: Hydrostatic pressure—Burst test

1275 Metric screw threads for fasteners

1722 Pipe threads of Whitworth form

1722.1 Part 1: Sealing pipe threads

1851 Maintenance of fire protection equipment

1851.2 Part 2: Fire hose reels

2441 Installation of fire hose reels

2554 Hose and hose assemblies for air

2700 Colour standards for general purposes

1.3 DEFINITIONS For the purpose of this Standard, the definitions below apply.

1.3.1 Approved—approved by the regulatory authority.

1.3.2 Regulatory authority—a Minister of the Crown, a government department, or other public authority having power to issue regulations, orders, or other instructions in respect of any subject covered by this Standard.

1.3.3 Fire hose reel—an assembly consisting essentially of a hose, nozzle, drum, inlet pipe, connection fitting, stop valve and, where required, a hose guide.

1.3.4 Fixed fire hose reel—a fire hose reel which is permanently fixed to a structure.

1.3.5 Swing fire hose reel—a fire hose reel which is hinged on a structure so that it can be swung out.

1.3.6 Automatic fire hose reel—a fixed or swing fire hose reel whereby the stop valve is operated automatically by the rotation of the drum when the hose is withdrawn or rewound.

1.3.7 Manual fire hose reel—a fixed or swing fire hose reel whereby the stop valve is operated manually.

1.3.8 Jet—an undispersed stream of water emitted by the nozzle.

1.3.9 Spray—a stream of water dispersed into small droplets by the nozzle.
