

Australian Standard[®]

**Recommended practice for
chemical analysis by ion
chromatography**

This Australian Standard was prepared by Committee CH/23, General Methods of Chemical Analysis. It was approved on behalf of the Council of Standards Australia on 28 August 1989 and published on 9 February 1990.

The following interests are represented on Committee CH/23:

Australian Government Analytical Laboratories
Australian Institute of Food Science and Technology
Australian Mineral Development Laboratories
Confederation of Australian Industry
National Association of Testing Authorities, Australia
National Health and Medical Research Council
Railways of Australia Committee
Royal Australian Chemical Institute
University of Sydney

Additional interests participating in the preparation of this Standard:

Department of Water Resources, N.S.W.
Instrument manufacturers
Instrument pump manufacturers
Iron and steel manufacturers
Surfactant manufacturers
Sydney Technical College
University of New South Wales
University of Queensland
University of Technology

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 88224.

PREFACE

This Standard was prepared by the Standards Australia Committee on General Methods of Chemical Analysis under the direction of the Chemical Standards Board. This Standard describes both suppressed and non-suppressed ion chromatographic techniques and their use in methods of chemical analysis. The recommendations herein are intended to apply to Australian Standard methods for ion chromatography.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

STANDARDS AUSTRALIA

Australian Standard

Recommended practice for chemical analysis by ion
chromatography

SECTION 1. SCOPE AND GENERAL

1.1 SCOPE. This Standard sets out recommendations for instrumentation and operating techniques suitable for chemical analysis of both cationic and anionic species by non-suppressed (sometimes referred to as electronic suppression) and suppressed (sometimes referred to as chemical suppression) ion chromatographic techniques. Accepted methods of ion chromatography are based on ion-exchange, ion-pairing or ion-exclusion separation, all of which have similar principles; for simplicity, only procedures based on ion-exchange are referred to in this Standard. This Standard includes a summary of instrument testing procedures to ensure correct calibration and operation of the instrument.

1.2 PRINCIPLES OF ION CHROMATOGRAPHY. Anions and cations present in aqueous solution are separated, detected and quantified by means of high-performance ion-exchange chromatographic techniques.

The sample is injected into the ion chromatograph. An ionic eluent moves the sample through the analytical column, which is packed with a low

capacity cation- or anion-exchanger. The sample ions are separated according to their affinities for the ion-exchange sites. Upon elution from the column, the ions are monitored by an appropriate detector. Changes in the detector response are recorded by a strip chart recorder, integrator or computer. The ions are identified by their retention times, and the ion concentration is determined by measuring the peak height or peak area and comparing it to a calibration curve prepared from calibration standards.

1.3 REFERENCED DOCUMENTS. The following documents are referred to in this Standard:

- AS
2162 Code of practice for the use of volumetric glassware
- 2850 Chemical analysis—Interlaboratory test programs—For determining precision of analytical method(s)—Guide to the planning and conduct
- ASTM
D 1193 Specification for reagent water
