

# Australian/New Zealand Standard™

## Procedures for the collection, detection and quantitation of drugs of abuse in urine

## **AS/NZS 4308:2001**

---

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee CH-036, Analysis of Body Fluids and Wastes. It was approved on behalf of the Council of Standards Australia on 16 March 2001 and on behalf of the Council of Standards New Zealand on 9 March 2001. It was published on 29 March 2001.

---

The following interests are represented on Committee CH-036:

A.C.T. Government Analytical Laboratory  
Amcosh Occupational Health Services  
Australasian Association of Clinical Biochemists  
Australian Government Analytical Laboratories  
Australian Institute of Medical Scientists  
Hunter Area Pathology Service  
Institute for Environmental Science & Research, New Zealand  
Institute of Medical and Veterinary Science  
LabPlus, Auckland Healthcare  
Medical Industry Association of New Zealand  
Minerals Council of Australia  
National Association of Testing Authorities Australia  
National Institute of Forensic Science  
New Zealand Engineering Printing & Manufacturing  
Northern Sydney Health  
The Prince Henry & The Prince of Wales Hospitals  
Queensland Health Scientific Services  
Royal College of Pathologists of Australasia  
Royal Hobart Hospital  
Royal Prince Alfred Hospital  
WorkCover New South Wales

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at [www.standards.com.au](http://www.standards.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

## PREFACE

This Standard was prepared by the Standards Australia Committee CH-036, the Analysis of Body Fluids and Waste to supersede AS 4308—1995, *Recommended practice for the collection, detection and quantitation of drugs of abuse in urine*.

The objective of this Standard is to specify an appropriate collection procedure for samples and the competence of the laboratory conducting the test. A range of options for the preliminary test is presented but a chromatographic separation coupled to mass spectrometry is the only approved confirmatory test technology at present. The cut-off levels listed for both the preliminary test and confirmatory test are defined. The Standard addresses only the testing of samples for medico-legal purposes. The testing of samples for clinical use is not covered.

The term ‘informative’ has been used in this Standard to define the application of the appendix to which it applies. An ‘informative’ appendix is only for information and guidance.

STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

**Australian/New Zealand Standard**

**Procedures for the collection, detection and quantitation of drugs of abuse in urine**

SECTION 1 SCOPE AND GENERAL

**1.1 SCOPE**

This Standard sets out procedures for the sample collection and the detection and quantitation of drugs of abuse in human urine. The method is intended for workplace, medicolegal or court directed detection of any or all of the following classes of drugs:

- (a) Opiates.
- (b) Sympathomimetic amines.
- (c) Cannabis metabolites.
- (d) Cocaine metabolites.
- (e) Benzodiazepines.

NOTE: The detection and reporting of drug classes other than those listed above is not precluded. See Clause 6.1(g).

Aspects of this Standard have relevance to testing for drugs of abuse in urine; however, clinical testing is outside the scope of this Standard. This Standard does not cover the testing of urine samples following excessive intake of therapeutic drugs or vitamins, exogenous hormone intake or ingestion of performance-enhancing drugs which may be used by sports participants.

Procedures for initial testing are set out in Section 4. Procedures for confirmatory testing are set out in Section 5.

NOTE: It is a requirement of this Standard that initial testing and confirmatory testing are performed in the same laboratory (see Clauses 4.1 and 5.1).

**1.2 REFERENCED DOCUMENTS**

The following documents are referred to in this Standard:

AS

- 2162 Verification and use of volumetric apparatus
- 2162.1 Part 1: General—Volumetric glassware
- 2162.2 Part 2: Guide to the use of piston-operated volumetric apparatus (POVA)
- 2164 Laboratory glassware—One-mark volumetric flasks
- 2166 One-mark pipettes
- 2167 Graduated straight pipettes

AS/NZS

- 2243 Safety in laboratories
- 2243.1 Part 1: General
- 2243.2 Part 2: Chemical aspects
- 2243.3 Part 3: Microbiology

ISO

- 3696 Water for analytical laboratory use—Specification and test methods
