

Australian Standard™

Soils for landscaping and garden use

This Australian Standard was prepared by Committee CS-037, Garden Soils and Potting Mixes. It was approved on behalf of the Council of Standards Australia on 4 August 2003 and published on 5 September 2003.

The following are represented on Committee CS-037:

Agriculture Victoria
Australian Institute of Horticulture
Australian Society of Soil Science Incorporated
Certification Bodies (Australia)
NSW Agriculture
NSW Department of Public Works and Services
Nursery & Garden Industry Australia
TAFE NSW
Turfgrass Association of Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 01336.

Australian Standard™

Soils for landscaping and garden use

Originated as AS 2223—1978.
Previous edition AS 4419—1998.
Third edition 2003.

PREFACE

This Standard was prepared by the Standards Australia Committee CS-037, Garden Soils and Potting Mixes to supersede AS 4419—1998, *Soils for landscaping and garden use*.

Changes made in this edition include refinements of the toxicity test, and marking has changed to include bold line bordering around the health warnings for prominence on the bag or other documentation.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

FOREWORD

Due to the complexities of soil science, the large number of different soil types that occur in nature and the fact that many soils now sold for use in landscapes and gardens are blends of organic and mineral components, soils that meet the general requirements of this Standard fall within a fairly wide range of properties.

Some plants have a distinct preference for soils with particular properties, therefore the appropriate soil should be carefully selected if optimum results are desired. Consequently, additional information on the suitability of soils with various properties for particular situations is provided. When in doubt, the consumer should seek specialist advice. In many cases the addition of fertilizer will also be necessary to achieve satisfactory results.

As consumers may be confused by the various terms for soils of different types, this Standard defines the major types and gives information on soil selection and use in an Appendix.

Products complying with AS 4454, *Compost, soil conditioners and mulches*, and soils complying with this Standard must meet the chemical contaminants criteria for unrestricted use, therefore the use of composts complying with AS 4454 as ingredients in landscaping soil blends will ensure that chemical contaminants levels are not undesirably high in soils.

STANDARDS AUSTRALIA

Australian Standard

Soils for landscaping and garden use

1 SCOPE

This Standard sets out requirements for general purpose soils, top dressing, topsoil and landscaping mixes, for domestic and commercial use, supplied in either bulk or bagged lots.

NOTES:

- 1 The requirements of this Standard specify soils suitable for the vast majority of plants but do not cover soils for plants with special requirements, cricket pitch soils, other specialist sporting turf soils, on-site soils or fertilizers.
- 2 Requirements for potting mixes are specified in AS 3743.
- 3 It is often assumed that the darker the soil the better the quality. As this is not always the case, this specification does not specify colour requirements for soils.
- 4 Guidelines for taking soil samples are given in Appendix A.
- 5 Information on selection and use of soils is given in Appendix L.

2 OBJECTIVE

The objective of this Standard is to provide manufacturers with a set of requirements which will ensure that soils can culture and maintain plant growth and to give users, such as growers, landscape architects and consumers, assurance of the suitability and quality of soils.
